

A panoramic view of Torino, Italy, at dusk. The central focus is the Mole Antonelliana, a large dome-shaped building with a tall, slender spire, illuminated from below. The city's lights are visible, including a prominent curved row of buildings in the foreground. In the background, the Alps mountains are visible under a blue and orange sky.

Thanks to Dr. Sedigh and Euromedical, the local sales representative, UVENTA participated in 2<sup>nd</sup> Turin Advanced Course of Reconstructive Urology, Andrology and Robotics for the second time.

The symposium was full of intense and interesting courses specifically in urethroplasty and penile implants. UVENTA was introduced as a new product with minimally invasive technique for urine flow preservation.

Like last year, UVENTA was used in two live surgeries.

1<sup>st</sup> : Urethral stent insertion

2<sup>nd</sup> : Urethral stent ★★REMOVAL★★

Dr. Sedigh removed urethral stent implanted at bulbar site 1 year ago. The procedure went so smooth, quick, simple and safe.

There was a hot debate raised by Dr. Mundy from the UK about the effectiveness of using stent in urethral stricture. It was a good opportunity to hear concerns from surgeons and a good chance to see what we should prove from now on as a manufacturer as well.

I would like to invite you to the live case.

If you want to see only the highlight, forward to 5 minutes.

However, I recommend you to see the whole video.

# 1 Day Visit in Athens

I (Léa) visited Athens, Greece right after the symposium to have a meeting with the new partner, Mr. Thanos Mellos. Even though it was our first training, Mr. Mellos and his team were so well prepared with UVENTA information through brochures and youtube clips. Based on their own study, we could go deeper from basic product information to special cases done with UVENTA.

Hope to hear great news from Greece soon!
